MOONBASE ALPHA

Jim Conners turned towards his vidscreen as it came alive with a message from headquarters.

"...Information just received confirms the existence of a 21st Century Lunar base on Neptune's second moon. The base is inhabited by an alien civilisation and pose a threat to the G-SEC security system. The base's defence system, an early 21st century reactor core, must be destroyed so further action can be taken by G-SEC security. You have been chosen for the mission, and have been assigned the latest in advanced technological space weaponry.
It is imperative that you do not fail..."

Use joystick in port 1, or the following keys to manoeuvre your ship:- A,z,:,;,SPACE.
BREAK defines keys, or resets to title page from game.
Hit space to start.

LOADING PROCEDURE:

Type 'Load (CR)', and press play on tape. When '*Loading End' is displayed, press (CR) again, and the program will load.

If the program will not load, try the copy on the opposite side of the tape.

NOTE: The program runs only with Level III B cartridge in the cartridge port.
